Benefits

The version 15.5 release of KeyCreator 2017 enhances performance for layouts. A new authentication license option for the user. Also added are customer-driven options for layout generic move and section view and restyle arrowhead settings.

Performance

Creation/modification of "Advanced PHL" HLR/HLD instances (Layout Views)

- Multi-body parts will process much faster
- Now takes advantage of parallel processing on multiple CPUs

Licensing

New login authentication

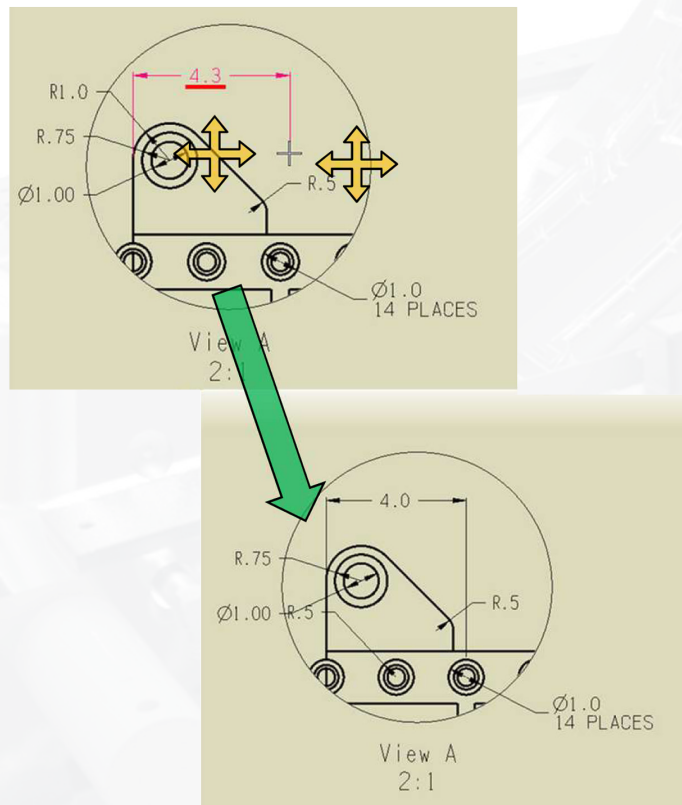

- Users can manage license(s) directly on the web from their Kubotek account
- Simpler and flexible software licensing and account management
- Release and assign licenses 24/7

Detailing

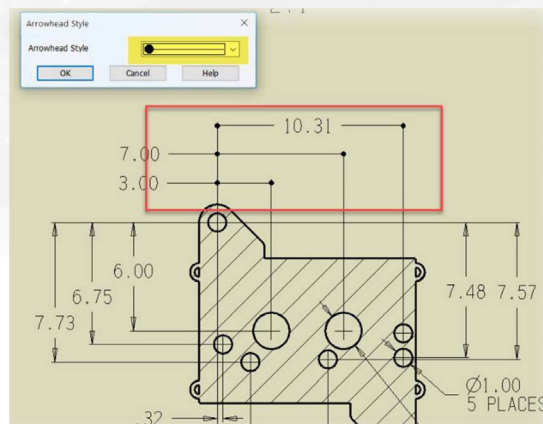

Generic Move improvements on dimensions

- Function is now aware of dimension attachment.
- Previous versions only allowed re-location of the text.
- Allows relocation of the witness lines in addition.
- Useful for reattaching unassociated dimensions.

New Detail Restyle Arrowhead

- Allows quick method of changing arrow types
- Window/Polygon select dimension to change multiple arrowheads at one time

Interoperability

KeyCreator continues improvements on its extensive import capabilities with several interoperability updates.
